

LifeShield Laser

Reference Guide

Positive Beneficial Frequencies

1. The laser uses two AAA batteries. Insert both of the batteries with the positive pole facing the end cap (on/off) switch (as pictured).

2. When turning the laser on use the pad of your finger and press down until the beam appears. When you release the on/off button the laser turns off. If you press down firmly on the on/off button the laser will continue to stay on until you press down firmly to turn it off.

3. For healthier plants and longer life of cut flowers use the laser on all water that you use to water your plants.

4. For your pets, use the laser on all food and water, and/or on areas of your pet's body for pain control.

5. To properly apply the LifeShield Laser frequencies, move the laser in a circular motion, such that the point of contact (the visible dot) moves in a clockwise (to the right) circular motion over the intended target area.

To treat food and water use the laser for approximately 8-10 seconds in a circular motion, at a distance of 4-8 inches from the intended target.

7. For direct body treatment, begin with a 2-4 minute cycle. Repeat as necessary. Frequency of applications needed may vary depending on severity of injury.

8. When changing batteries make sure the threads are lined up before screwing on the end cap. When the end cap is aligned properly it screws on easily.
